EDMOND OUTDOOR LIGHTING CLASSIFICATIONS FOR SUBDIVISIONS

STREET LIGHTS

Quality and location must be installed in new additions according to an approved street lighting plan as required by City ordinance. The initial cost is the developer's responsibility and continuing electricity/maintenance costs are the City's responsibility.

All street lights must be 100 watt high pressure sodium with design specifications approved by Edmond Electric.

AREA LIGHTS

Additional locations will be classified as "area lights" and may be provided for straight monthly billing with no initial cost for purchase of the light/pole equipment. The resident or the Home Owners Association (HOA) will be billed the standard rate for that service, which is currently \$12.23 per month for the Ready Light on the wooden pole and \$22.84 per month for the decorative light plus current Fuel Cost Adjustment Charge.

For all area light installations there will be an initial charge by Edmond Electric to extend the service line if the light is not located within five feet of an existing power supply.

We have enclosed the specifications for our decorative lights. Any lighting installed other than through Edmond Electric must be metered and will not be maintained by Edmond Electric.
